Materials Evaluation Authors' Guidelines

The American Society for Nondestructive Testing (ASNT), Inc., is a nonprofit professional society composed of about 11,000 members, organized to advance scientific, engineering, and technical knowledge in nondestructive testing (NDT) through education, research, and the compilation of information useful to the individual and beneficial to the public. ASNT is the only professional society in the United States devoted exclusively to NDT.

Materials Evaluation, an official journal of ASNT, encourages original articles on NDT applications and on applied NDE research. Published monthly, the magazine includes two levels of articles.

■ Feature and "tutorial" articles inform readers about developments in practical inspection techniques and in other developments relevant to the NDT community. Ideally, articles in this category are practical and experience-based, and need not be of a highly technical nature. Management-oriented articles and "thought" pieces are encouraged as well.

■ Technical papers present and interpret experimental results in applied NDT. The technical papers are peer-reviewed and are indexed by the major abstracting services.

Corresponding authors are asked to assign copyright to ASNT.

Authors submitting manuscripts to *Materials Evaluation* should send five double-spaced copies accompanied by camera-ready art. Papers should be in English, typewritten or cleanly word-processed, and double-spaced. Please do not send faxes of manuscripts.

Authors of accepted papers will be asked to provide text (and, if practical, graphics) on Macintosh- or DOS-formatted 3.5-in. disks.

A technical paper should be limited in length to 5,000 words and 10 illustrations (or 10 parts of compound illustrations). Feature material is more flexible in terms of length and graphics. Contact the editor if you have questions.

Manuscripts should include a brief biography, address, and telephone number of each author. Technical papers (unlike feature articles) must include a longer biography, abstract, and keywords for indexing.

Materials Evaluation is a metric journal, following the International System (SI) of Units. If an author gives measurements in US Customary System units, they should be preceded by the equivalent SI unit.

Materials Evaluation will not reproduce or typeset a computer program.
